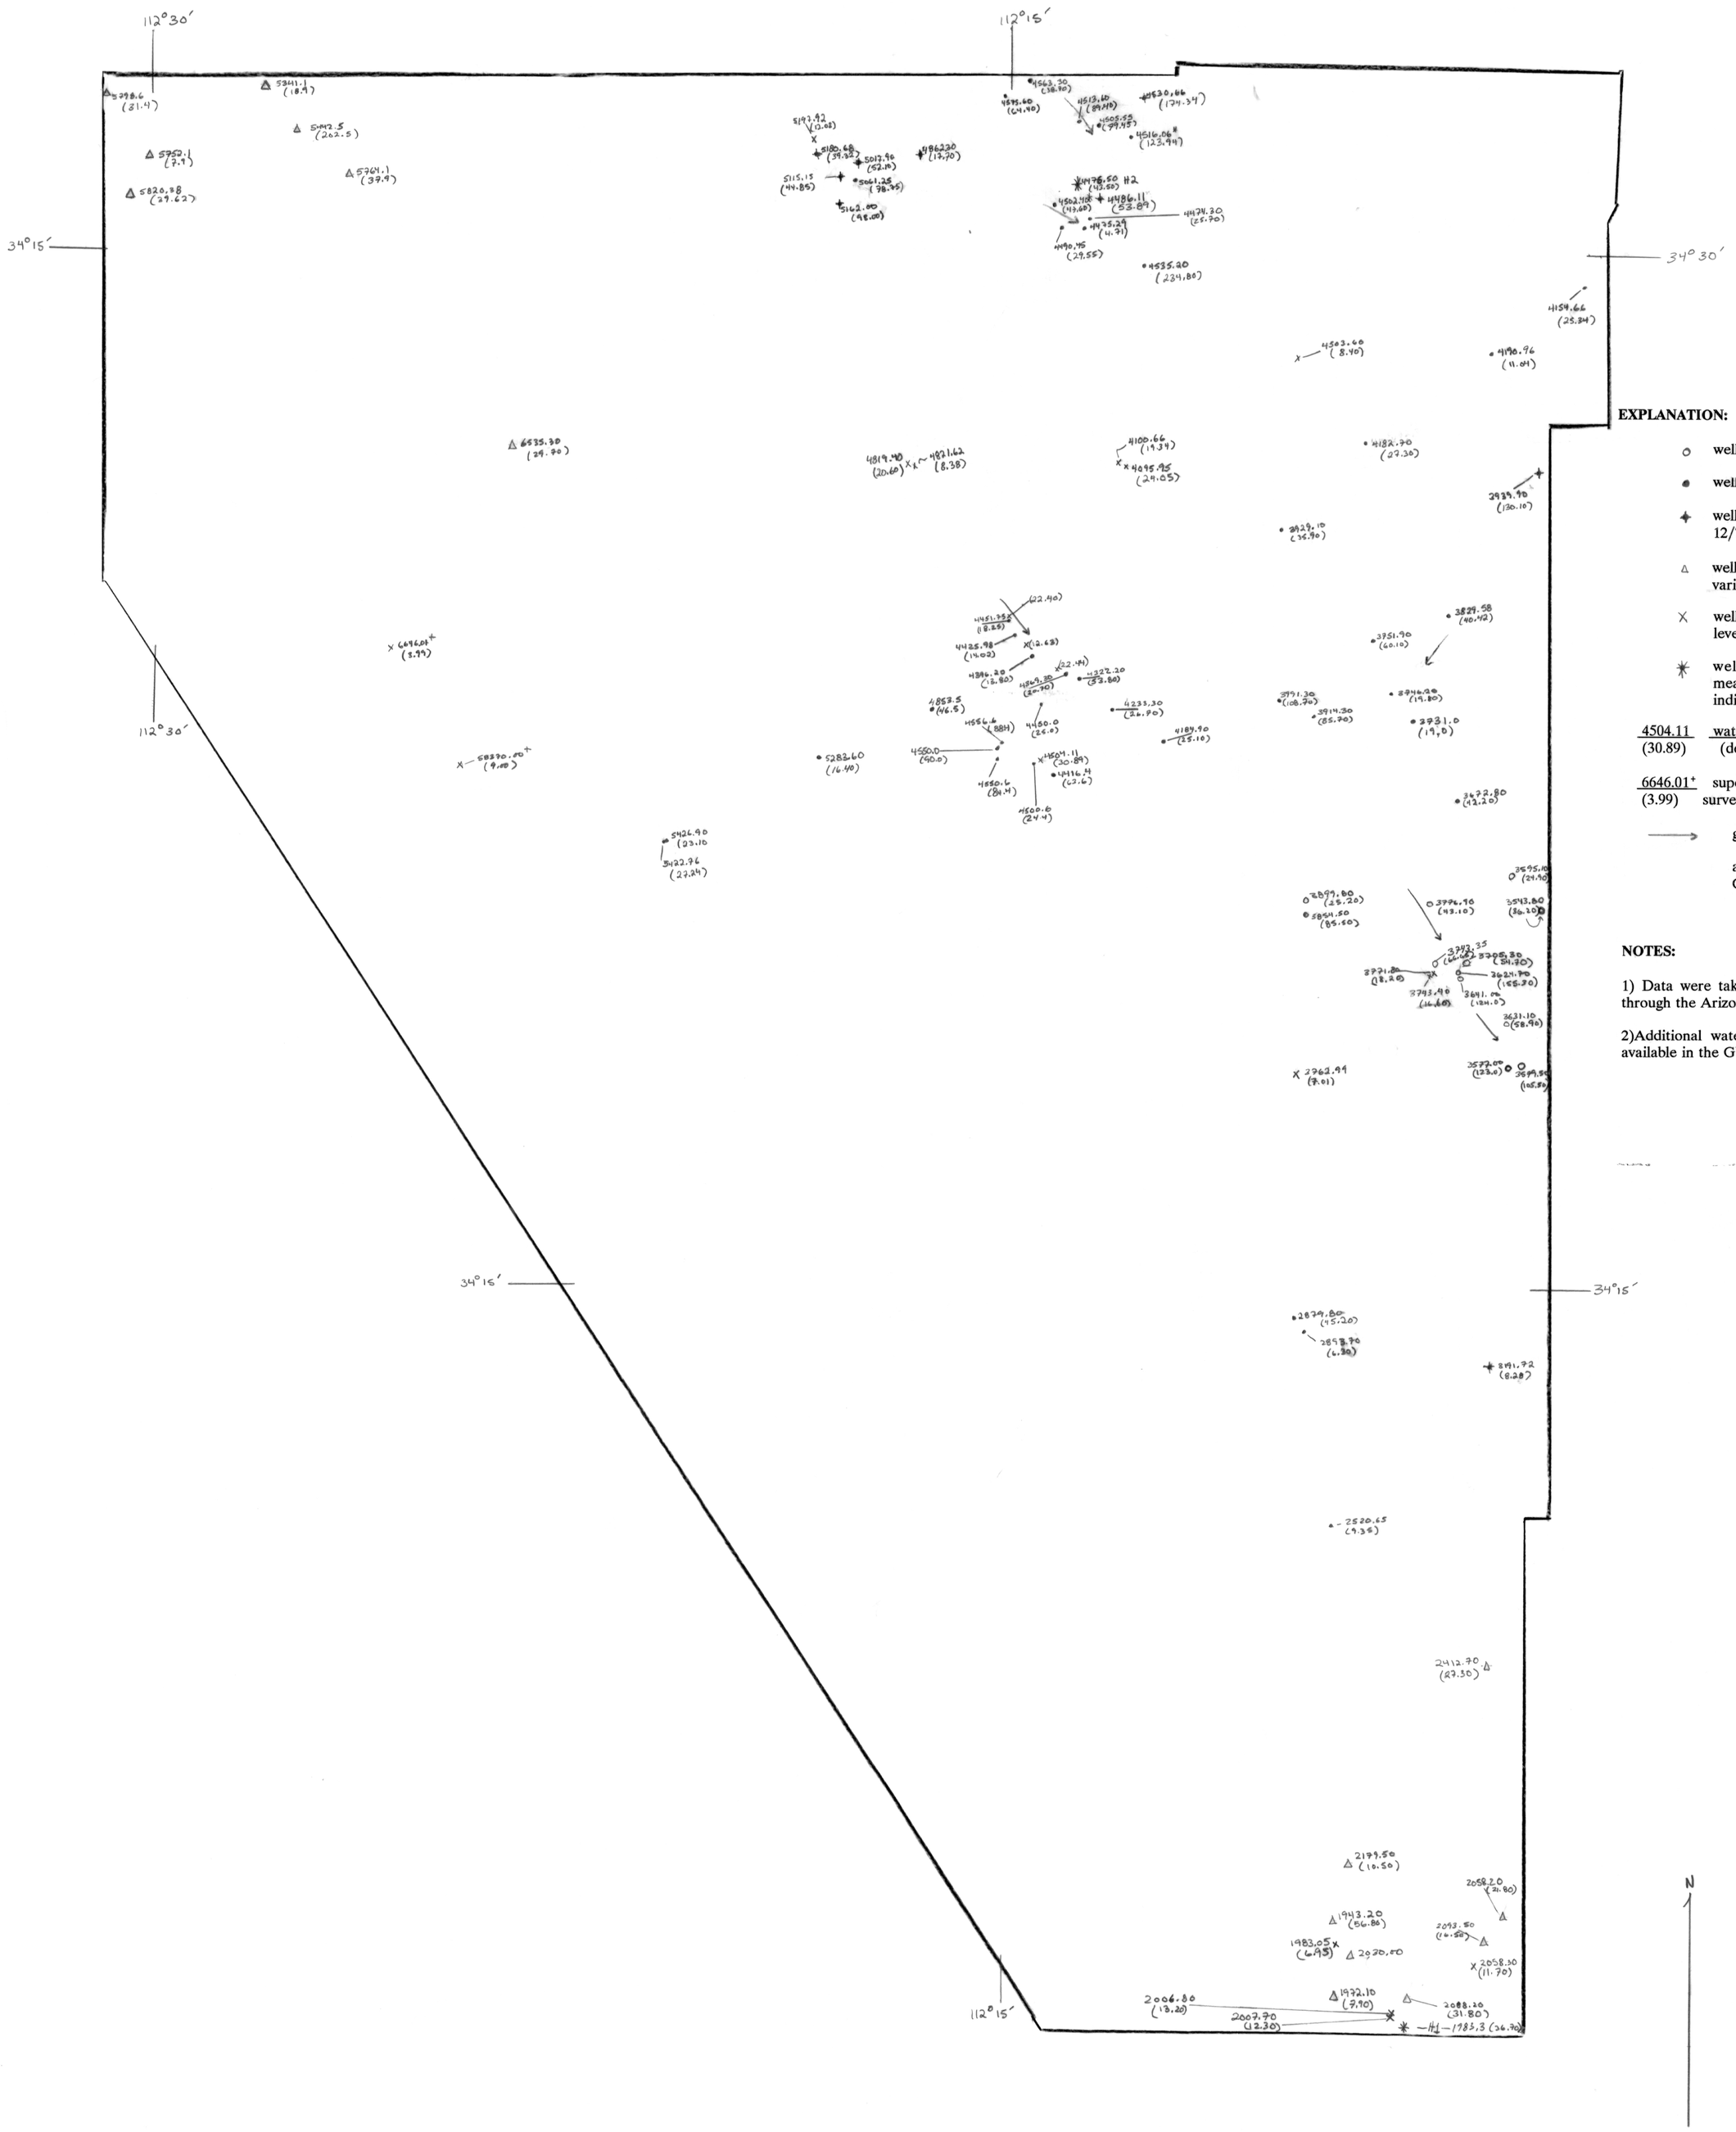
WATER LEVEL ELEVATION AND DEPTH TO WATER



EXPLANATION:

- ○ well location (water level measured in 1977)
- ● well location (water level measured 9-11/78)
- ✦ well location (water level measured 8 or 12/78)
- △ well location (water levels measured at various times)
- X well location (well depth ≤ 50 feet, water levels measured at various times)
- ✳ well location (several water level measurements have bee recorded for individual wells)

4504.11 / (30.89) — water level elevation (feet) / (depth to water (feet))

6646.01+ / (3.99) — superscript (+) indicates that well has not been surveyed

→ general groundwater flow direction

approximate boundary of Tertiary and Quarternary sedimentary rocks

NOTES:

1) Data were taken from the GWSI data base (available through the Arizona Department of Water Resources).

2)Additional water level and well construction data are available in the GWSI data base.
