Figure 3.

Preliminary Study of Possible Quaternary Faults in Central Arizona

by Philip A. Peartree and Robert B. Scarborough
Arizona Bureau of Geology and Mineral Technology
Tucson, Arizona
February 1985

Scale 1:250,000

Legend:
- Black solid line = active faults
- Black dashed line = possible faults
- Gray dashed line = faults not active
- Blue line = major rivers
- Green line = minor rivers
- Red line = highways
- Black dot = town
- White dot = minor town
- Gray dot = unincorporated area

Numbers are flight line and frame number for each 1:58,000-scale aerial photograph used in this study. Photographs were taken by the U.S. Geological Survey.

Areas of active faults are outlined by black solid lines. Areas of possible faults are outlined by black dashed lines. Areas of faults not active are outlined by gray dashed lines.

Numbers in squares denote flight lines and frame numbers for each 1:58,000-scale aerial photograph used in this study.
