

EXPLANATION

- Dump material
- Perthite-rich pegmatite and irregular masses of quartz, all very coarse grained (core and intermediate zone, undivided)
- Perthite-rich pegmatite, very coarse grained, with some quartz, albite, muscovite, and schorl (outer intermediate zone)
- Perthite-quartz pegmatite and graphic granite, coarse grained, with scattered albite, muscovite, and schorl (wall zone)
- Quartz-rich pegmatite, with albite, perthite, schorl, and micas, fine to medium grained (border zone)
- Quartz-mica schist, quartz-mica-amphibole schist, chlorite schist, and epidosite
- Strike and dip of planar structure in metamorphic rocks
- Border of pegmatite body, showing dip, dashed where approximate
- Contact between pegmatite zones
- Outline of adit beneath dump from Main cut
- Rim of pit or cut
