EXPLANATION

Mainly massive quartz

High-grade feldspar
(very coarse, clean perthite, with
some large masses of quartz and
minor amounts of albite and
muscovite)

Medium-grade feldspar
(coarse to very coarse, moderately
clean perthite, with scattered
but locally abundant quartz,
albite, and muscovite)

Non-commercial feldspar
(mainly pegmatite in which per-
thite is a minor constituent
and/or is not recoverable by
ordinary hand sorting)

Schist and gneiss

Border of pegmatite body, showing
dip; dashed where approximate

Contact between pegmatite zones

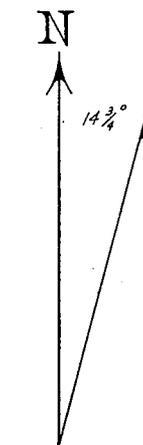

Generalized boundary between masses
of perthite-bearing pegmatite of
contrasting commercial grade;
dashed where approximate

Rim of cut or pit

Limit of stripped area

Mapped by R.H. Jahns
